A metalloid is a type of chemical element which has properties in between, or that are a mixture of, those of metals and nonmetals. There is neither a standard definition of a metalloid nor complete agreement on the elements appropriately classified as such.

### **Metalloid - Wikipedia**

The group 11 metals are typically categorised as transition metals given they can form ions with incomplete d-shells. Physically, they have the relatively low melting points and high electronegativity values associated with post-transition metals.

ABSTRACT. This paper describes the production methods and the prospective uses of carbon molecular sieves. The main route to these materials is replication synthesis, where a silica or aluminosilicate molecular sieve is used as template to grow the carbonaceous phase in the voids.

### **Why are carbon molecular sieves interesting? - SciELO**

Overview. The Department of Energy (DOE) is a cabinet-level agency that has both important energy- and national security-related missions. DOE's roots go all the way back to World War II and the Manhattan Project, the top-secret program that launched America's effort to develop and stockpile nuclear weapons.
