ELEMENTARY LINEAR ALGEBRA - Number theory

In mathematics, the fundamental theorem of linear algebra makes several statements regarding vector spaces. Those statements may be given concretely in terms of the rank r of an $m \times n$ matrix A and its singular value decomposition:

Fundamental theorem of linear algebra - Wikipedia

In linear algebra and functional analysis, a projection is a linear transformation P from a vector space to itself such that $P^2 = P$. That is, whenever P is applied twice to any value, it gives the same result as if it were

applied once . It leaves its image unchanged. Though abstract, this definition of "projection" formalizes and generalizes ...

Vector magnitude and direction. A vector has magnitude and direction. The magnitude of a vector is measured in terms of its norm. The (p) -norm, for $(p \geq 1)$, provides a generalized way of computing any norm of a vector.
