A pump is a device that moves fluids (liquids or gases), or sometimes slurries, by mechanical action. Pumps can be classified into three major groups according to the method they use to move the fluid: direct lift, displacement, and gravity pumps.

Pump applications. The purpose of this Application guide is to give design and project engineers and any other interested parties the basic information for selecting the correct variable speed drive (VSD) system for pump installations in industrial, public and domestic applications.

Using variable speed drives (VSDs) in pump applications

As of January 1, 2017, motors must meet the IE3 efficiency levels listed here to secure the CE mark. The figures in parentheses are the less efficient IE2 levels that are compliant for motors equipped with variable-speed drives.

A turbopump is a propellant pump with two main components: a rotodynamic pump and a driving gas turbine, usually both mounted on the same shaft, or sometimes geared together.

Turbopump - Wikipedia

The natural decline in the reservoir energy will impact the flowrate of oil, gas or water, thereby creating

instabilities and resulting in decreased production. Artificial lift is used in oil-dominated or liquid-loaded gas systems to increase and stabilize hydrocarbon production, as well as to minim

INTRODUCTION. The design of the pump inlet pipework defines the resulting hydraulic conditions experienced at the pump inlet/impeller. The importance of the pump inlet condition is often overlooked and, according to Jones et al (2008) is likely to be the single reason mostly responsible for the failure of pumps.
